Aurora

Third Quarter 2026 Business Review

OCTOBER 28, 2026

Cautionary statement regarding forward-looking statements

This presentation contains certain forward-looking statements within the meaning of the federal securities laws. The words "believe," "may," "will," "estimate," "continue," "anticipate," "intend," "expect," "could," "would," "project," "plan," "potential," "target," and similar expressions and variations thereof are intended to identify forward-looking statements, but are not the exclusive means of identifying such statements.

All statements contained in this presentation that do not relate to matters of historical fact should be considered forward-looking statements, including but not limited to, those statements around our driverless operations and future financial and operating performance; our ability to meet customer demand, reduce costs, and general expectations in future periods; the benefits of integrating AI into our product; the safety, efficiency and cost benefits of our technology and product; our ability to achieve certain milestones around, and realize the potential benefits of, the development, manufacturing, scaling (including, but not limited to, the route expansion strategies, the transition to our DaaS model, fleet size and our product's availability and capabilities) and commercialization of the Aurora Driver and related services, on the timeframe we expect or at all; our relationships with our partners and customers (including risks that anticipated customer orders may not materialize, may be delayed, and/or customer contracts may be subject to cancellation, termination, or reduction in scope and whether customer intentions to order, such as non-binding MOUs, result in binding agreements and orders) and anticipated benefits that they may derive from our product (including, but not limited to, hardware availability, efficiency gains and increasing revenues and margins); the timing for developing, and the anticipated benefits of, future generations of hardware kits; the anticipated impact of our product on the freight industry and economy; our expected market share and competitive position; the efficiency and effectiveness of our validation process and profitability of our products and services; the regulatory tailwinds and framework in which we operate and our ability to comply with the current and future regulatory framework; and our financial performance, anticipated investment in truck fleet and expected cash use and cash runway.

These statements are based on management's current beliefs and assumptions and are neither promises nor guarantees, but involve known and unknown risks, uncertainties and other important factors that may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements.

Important factors that could cause actual results to differ materially from the forward-looking statements include, among others, risks and uncertainties relating to the development, validation, safety performance and commercialization of the Aurora Driver; regulatory developments and approvals; the performance of, and relationships with partners and customers; market demand and competitive dynamics; and liquidity and access to capital. A discussion of these and other risks and uncertainties is included under the heading "Risk Factors" section of Aurora Innovation, Inc.'s ("Aurora") Annual Report on Form 10-K for the year ended December 31, 2025, filed with the U.S. Securities and Exchange Commission (the "SEC") on February 11, 2026, and other documents filed by Aurora from time to time with the SEC, which are accessible on the SEC website at www.sec.gov. Additional information will also be set forth in our Quarterly Report on Form 10-Q for the quarter ended September 30, 2026.

All forward-looking statements reflect our beliefs and assumptions only as of the date of this presentation. Aurora undertakes no obligation to update forward-looking statements to reflect future events or circumstances, except as required by law.

All third-party logos appearing in this presentation are trademarks or registered trademarks of their respective holders. Any such appearance does not necessarily imply any affiliation with or endorsement of Aurora.

This presentation also contains estimates and forecasts based upon management's current expectations, beliefs and projections, many of which are inherently uncertain. This information reflects management's current assumptions and limitations and should be considered together with other information presented. Aurora's projected uses of cash are based upon assumptions including research and development and general and administrative activities, as well as capital expenses and working capital. Aurora does not undertake to update such data after the date of this presentation.

Aurora has reached an inflection point on the path to commercial scale

Have 20+ driverless trucks already built and coming into our fleet, and production is accelerating

Executed another landmark Driver as a Service (DaaS) memorandum of understanding (MOU) with Charger Logistics

Led the industry in securing a five-year FMCSA exemption permitting automated cab-mounted warning beacons in place of traditional, manually-placed roadside warning devices

Our commercial flywheel is accelerating — we now have 10 customers in our driverless cohort including two with DaaS MOUs representing 1,000 trucks

Transportation as a Service (TaaS)

In November, the Aurora Driver will be operating directly to sites for several driverless customers, including automated navigation through security checkpoints and weigh stations along the routes

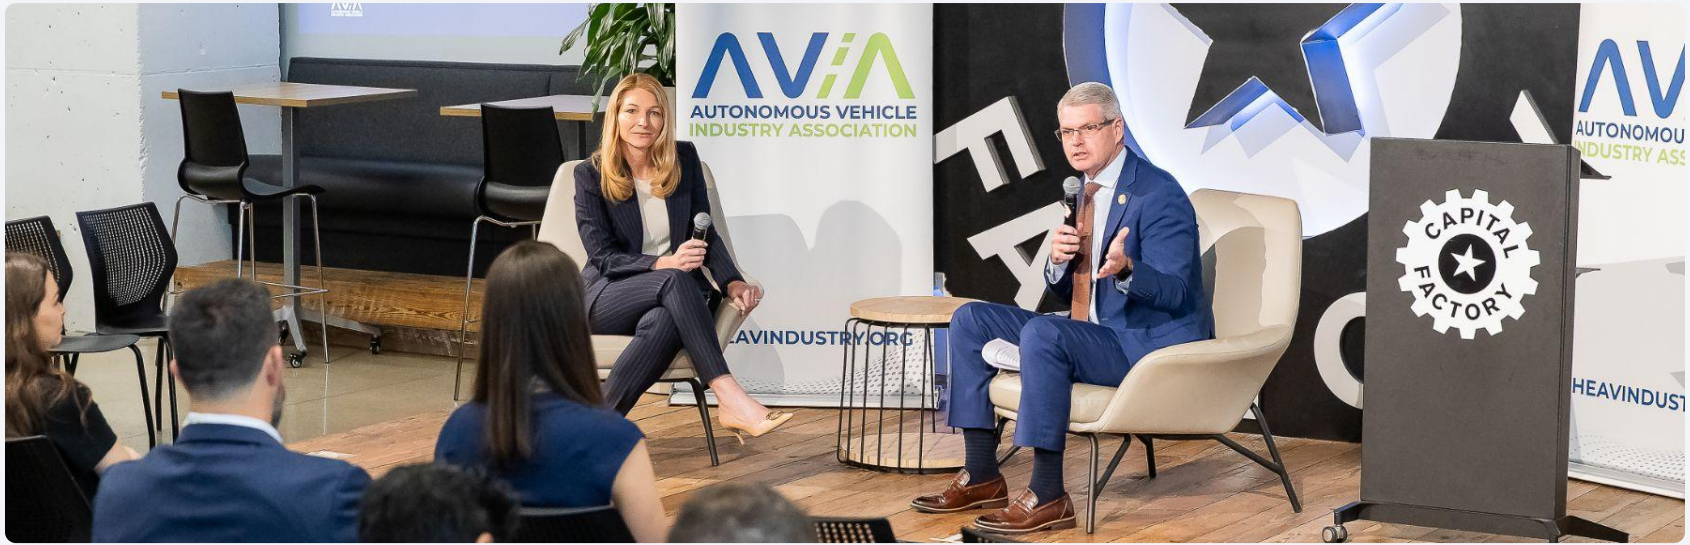

Over the coming months, we will begin site-to-site driverless operations for the majority of our customers.

With our weigh station traversal capability, the Aurora Driver can now autonomously determine if a station is open, navigate to an available scale lane, and adapt to different scale configurations. This capability makes it easier for customers to integrate the Aurora Driver into their networks.

The regulatory landscape increasingly supports scaled deployment

Earlier this month, FMCSA granted Aurora and the industry an important, five-year exemption, permitting driverless trucks to use cab-mounted warning beacons in place of traditional, manually-placed roadside warning devices. By successfully demonstrating that our warning beacon technology would likely achieve a level of safety equivalent to or greater than legacy requirements, Aurora's leadership in working with federal regulators has cleared the way for driverless freight at scale for the industry.

FMCSA Administrator Derek Barrs announcing warning device exemption at the Autonomous Vehicle Industry Association (AVIA) Autonomy Summit fireside chat with Aurora President, Ossa Fisher

We have 20+ driverless trucks already built and production at our upfitter Roush is accelerating

We expect to achieve our targeted production rate of 20 trucks per week in early December, representing an annualized production capability of more than 1,000 trucks.

Concurrently, we are preparing for full OEM industrialization with Volvo and PACCAR

Our strategic partnership with Volvo continues to advance, driven by deep operational alignment and growing customer demand. This supports their plans for the deployment of more than 300 driverless trucks in 2027 ahead of full industrial production in 2028.

"This is a deeply co-engineered partnership where our teams have been working side-by-side from design to commercialization. We have built a strong foundation together – merging our purpose built and purpose designed Volvo VNL Autonomous with the Aurora Driver. Now we jointly look forward to introducing fully driverless operations early next year, helping address capacity challenges in the transport industry while giving customers safe, reliable deliveries and consistent performance, day after day."

NILS JAEGER, PRESIDENT, VOLVO AUTONOMOUS SOLUTIONS

PACCAR and Aurora are jointly defining the path to a scalable launch of the third-generation commercial hardware kit integrated with PACCAR's future autonomy enabled platform on their assembly lines.

"The dialogue with fleets has fundamentally shifted from testing technology to capturing efficiency. Carriers facing labor shortages, rising fuel costs, and tight margins want safe, reliable solutions that protect their bottom line and deliver on customer commitments. Partnering with Aurora to integrate the Aurora Driver directly onto our Peterbilt and Kenworth production lines will give our customers the operational efficiency and scalability they require."

NOELLE PARLIER, GENERAL MANAGER, PACCAR INNOVATION CENTER, PACCAR

Third Quarter 2026 Summary Financial Results

($ in millions)	September 30, 2026
Cash and cash equivalents & short-term investments	$1,034

($ in millions)	Quarter Ended September 30, 2026	Year Ended December 31, 2025
Revenue	$3	$3
Cost of revenue	8	17
Research and development	203	745
Selling, general and administrative	49	142
Loss from operations	$(257)	$(901)
Net cash used in operating activities	$170	$581
Capital expenditures	$36	$31
